One Call API 2.5 to be closed

Dear OpenWeather user,

We would like to inform you about our plans to complete the migration from One Call 2.5 to One Call 3.0 that started 2 years ago. In line with this, **access to One Call 2.5 will be finally closed in June 2024.**

One Call 3.0 provides you with significantly advanced business-demanded features such as a minute forecast for 1 hour, 4 days forecast for any timestamp, a daily forecast for 8 days, including a human-readable summary, historical data (45-year archive) for timestamps, and with daily aggregation, 1.5-year long-term forecast with daily aggregation, and others.

[Click here for One Call 3.0 migration guide](#)

One Call 3.0 is free 1,000 calls/day

One Call 3.0 offers a flexible monthly subscription with a 'pay-as-you-call' scheme. You have 1,000 calls/day for free and pay only £0.0012 for each additional call. Please note, the OneCall 3.0 subscription requires credit card details. We use your payment card details only for those calls that go beyond the free limit. If you do not want to exceed a free limit you can always set a daily threshold for your account.

You don't need to get new API keys, all your current API keys will work with One Call 3.0 after subscription.

One Call 3.0 for business

For demanded projects, we provide custom One Call 3.0 packages, tailored to your specific needs. These can include a certain volume of calls per month at a fixed monthly price, an OpenWeather end-user license (as opposed to an open CC license applicable by

default), SLAs, and premium support options.

If this is something you would like to discuss, please [contact our sales team](#).

Contact us

We understand that this upgrade may require some adjustments to your solutions that run on our APIs and data. Please rest assured that we are ready to support you. If you have any questions or require assistance with this migration, please do not hesitate to contact our support at info@openweathermap.org

A few more words...

Recently, there were quite a few exciting changes at OpenWeather and we are glad to be able to share them with you:

Openweather and RMetS Challenge

We are thrilled to announce an online competition in partnership with RMetS, aimed at fostering innovative solutions in meteorological data analysis that emphasize sustainability, support green technology, integrate health considerations, and demonstrate a clear potential for real-world application, as these priorities mirror OpenWeather's dedication to environmental care.

To learn more, please visit <https://challenge.openweathermap.co.uk/>

Meteorology services

Our meteorology team can provide you with clear, actionable weather reports tailored to your specific requirements, no matter where you are in the world. From simple, clear interpretations of today's weather to insights designed specifically for your business use case, we will gladly assist.
